ORDISI, S.A., is a family company founded in 1959 and dedicated to the manufacture of electromedical devices. We specialize in two product lines: ASPIRATION and LIGHTING. The experience acquired during more than 60 years has made it possible for our devices to be of the highest quality. Since the beginning of our activity, our main goal has been to meet the needs of our customers, following the strictest market standards and using the latest technologies in our designs. The family atmosphere in ORDISI is what differentiates us. The fact that we are a family business optimises many of our internal processes, which leads to better customer service. Our clients enjoy special and friendly treatment. Currently, we export to many countries in the E.U. as well as to other continents. ORDISI's future is based in R&D as we strive to manufacture equipment with the greatest efficiency and responsibility. LIGHTING: Examination lamps. Procedure lamps. Surgical lamps: Our IGlux series has been designed to improve performance in the surgical field by using the latest LEDS generation that offers a higher color rendering (CRI) and minimizes heat emissions. ASPIRATION: Surgical suction pumps. Portable suction devices. Equipment characterized by low maintenance and mechanical robustness. With the most complete range of surgical aspirators on the market for electro-medicine.

We are a Spanish company that develops food supplements, medical devices, and cosmetics made from seawater: Ocular, Nasal, Dermo Spray, Drinkable vials, Probiotics, Sport supplements and we keep on working to wider our offer. The core of our business are seawater ampoules to drink. We have it in two presentations; one is made from 100% seawater (Hypertonic solution) and the other is made from a mix of seawater and spring water (Isotonic Solution).

Medical Equipment & Devices

VR-CARDIO revolutionizes cardiac care by offering the ability to diagnose and visualize heart arrhythmias using a non-invasive textile data acquisition system, moving beyond traditional and invasive catheter-based methods. It accurately represents electrocardiogram cardiac and transmembrane action potentials, showing the origins of heart arrhythmias with high detail. Employing advanced stereoscopic 360° VR/AR visualization, which can also be holographic, it allows for nearly real-time monitoring of the heart's electrical activity, enhancing the efficiency of cardiac care procedures. This innovative approach marks a significant advancement in efficient, non-invasive cardiac treatment.

Healthcare & General Services

Synkotech Biocompatible Materials (SBM) products are unique in the market as formulations are based on a methyldene malonate monomer and/or polymer. Combining this unique monomer and/or polymer with the activator, formulation additives and user-friendly delivery device brings to SBM Portfolio exceptional properties with biocompatible materials for the protection of the skin and wound closure.
